## PRENANO B-TOX

Size: 500g and 1Kg

**PreNano Botox is a vegan conditioning treatment** that provides a protective barrier for all hair types. Hair Botox treatment provides **intensive hydration, repairs damaged and broken hair fibers, and reduces frizziness**. It is an excellent option for both men and women who looking for a treatment that does not involve any harsh chemicals. To help get hair back on track, the anti-aging and **PH-balanced** properties of PreNano Botox help fill in any of the gaps in the hair's natural fiber, leaving it looking more youthful in appearance. The product contains **beneficial substances e.i. vitamins (E, A, F), antioxidants, and shea butter**.

**PreNano Botox** has been specially created to **repair damaged hair, preserve colour integrity, and protect** it from **heat damage**. Preparing hair for nanoplasty or protein straightening will not only help you to get the best results but also make the hair looks healthy and shiny for longer.

### How to use

The treatment begins with a cleansing shampoo to open the hair cuticles and prepare the strands for conditioning. Use a soft towel to absorb water from the hair and keep it wet in 20%. Blow-dry the hair if necessary. Hair Botox is then applied to the strands by massaging it on roots (1-2 cm from the scalp) to tips and brush the hair gently with a wide-tooth comb to work the product through the strands. Apply the excess of the product left on the brush back on the hair. PreNano Botox should always be applied in excess so that the strands will not dry out.

The treatment is left on the hair for a while, usually between 30 – 40 minutes. To shorten the processing time use a hairdressing tool to deeply heal damaged hair (e.i. Ultrasonic Infrared Straightener or Photon Laser). In this case, section the hair into thin strands and run the tool over a single thin piece of hair 4 - 5 passes.

You should rinse the product out with cooler water to seal the product into the hair, next start the hair straightening treatment (e.i. Nanoplasty or Golden Professional Protein Straightening). Otherwise, apply a **Diana Care Mask** to the middle part of each section, work the conditioner toward the ends of your hair. Don't apply the mask to sopping-wet hair. Leave on for 10 minutes, rinse out, and dry as usual.

If you do not have the Ultrasonic Infrared Straightener/ Photon Laser, you can use a hairdressing cap or infrazon hood hairdryer. In this case, you should leave the PreNano B-tox on for 40 – 50 min.

Once your client has had a Botox treatment done, needs to take special care of the hair to make sure that the results will last as long as possible. To maintain the effect of the treatment sulfate-free and paraben-free shampoo and conditioner should be used that included in **the Diana Care line**. Hair Botox is **a thermo-active** treatment, thus the hair should be blow-dried after washing to activate ingredients by the heat. After towelng off wet hair, set a dryer on medium heat. After they have dried, blow cold air on them for a few minutes using the hairdryer.
